

Consumer Information about your Electricity Supplier Maine

January 1, 2024 – December 31, 2024

Electricity suppliers in Maine must, by Maine law, provide fact sheets, or “uniform disclosure labels” from time to time to educate consumers about their electricity service. Your electricity is delivered by Central Maine Power, but the *electricity itself* is supplied by:

First Point Power, LLC

This fact sheet provides consumer information about the price, power sources and air emissions of service provided by this electricity supplier.

Power Sources

(January 1, 2024 – December 31, 2024)

The supplier provided electricity with the following resources:

	<u>Supplier's Mix</u>	<u>New England Mix</u>
Biomass	1.35	1.35
Coal	0.20	0.20
Diesel	0.95	0.95
Digester Gas	0.09	0.09
Efficient Resource	0.00	0.00
Fuel Cell	0.74	0.74
Hydro	8.56	8.56
Jet	0.01	0.01
Landfill Gas	0.73	0.73
Municipal Waste	0.42	0.42
Natural Gas	40.41	40.41
Nuclear	19.06	19.06
Oil	3.94	3.94
Other	0.74	0.74
Solar	6.67	6.67
Trash-to-energy	1.59	1.59
Wind	5.43	5.43
Wood	0.66	0.66
Import System Mix	8.45	8.45
Total*	100.00%	100.00%

**Percentages may be different due to rounding*

Air Emissions

(January 1, 2024 – December 31, 2024)

This table compares air emissions from this supplier's electricity mix to average emission levels from all New England power sources.

	<u>Supplier's Mix</u> (avg. lbs/MWh)	
Carbon Dioxide (CO₂)	645.97621	This is 0.0% less than the New England Average.
Nitrogen Oxide (NO_x)	0.50590	This is 0.0% less than the New England Average.
Sulfur Dioxide (SO₂)	0.20884	This is 0.0% less than the New England Average.

Notes: lbs/MWh = pounds per Megawatt-hour
1 Megawatt-hour = 1,000 kilowatt-hours

Additional Information and Required Notes:

Power Sources—Maine law requires retail electricity providers to periodically provide information to their customers on the mix of power sources used by the provider to serve their Maine customers' load.

Emissions—**Carbon Dioxide** (CO₂) is released when certain fuels are burned. It is considered a greenhouse gas and a major contributor to global warming. **Nitrogen Oxides** (NO_x) form when certain fuels are burned at high temperatures. They are considered contributors to acid rain and ground-level ozone (or smog). **Sulfur Dioxide** (SO₂) is formed when fuels containing sulfur are burned. Major health effects associated with SO₂ include asthma, respiratory illness and aggravation of existing cardiovascular disease. The production of electricity can produce other harmful emissions and have other environmental impacts. Environmental impacts differ among individual power plants.

If you have questions or need further explanation, please contact First Point Power, LLC toll-free at 888.875.1711 or the Maine Public Utilities Commission, toll-free, at 1-800-452-4699. Additional information can also be found at <http://www.maine.gov/mpuc>.
